INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/DK 03/00804

ŧ.	Ba	sis	of	the	rep	ort

1. With regard to the **elements** of the international application (Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report since they do not contain amendments (Rules 70.16 and 70.17)):

	Des	cription, Pages						
1-57		•	as originally filed					
	Clai	Claims, Numbers						
	1-29		filed with telefax on 07.10.2004					
	Dra	wings, Sheets	•					
	1-19)	as originally filed					
2.	With lang	regard to the langua uage in which the inte	age, all the elements marked above were available or furnished to this Authority in the ernational application was filed, unless otherwise indicated under this item.					
	These elements were available or furnished to this Authority in the following language: , which is:							
		the language of a tra	ge of a translation furnished for the purposes of the international search (under Rule 23.1(b)).					
		the language of publication of the international application (under Rule 48.3(b)).						
		the language of a tra Rule 55.2 and/or 55.3	inslation furnished for the purposes of international preliminary examination (under 3).					
3.	With inte	With regard to any nucleotide and/or amino acid sequence disclosed in the international application, the international preliminary examination was carried out on the basis of the sequence listing:						
		contained in the international application in written form.						
		filed together with the	e international application in computer readable form.					
		furnished subsequently to this Authority in written form.						
		I furnished subsequently to this Authority in computer readable form.						
		The statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.						
		The statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished.						
4.	The amendments have resulted in the cancellation of:							
		the description,	pages:					
~		the claims,	Nos.:					
		the drawings,	sheets:

INTERNATIONAL PRELIMINARY

EXAMINATION REPORT - SEPARATE SHEET

Re Item IV

The present application lacks unity for following reasons:

Claims 1-8 are directed to a coupling method of a fiber claimed in claim 10.

Claims 9 and 29 are directed to an article comprising a fiber connected to an article using the method claimed in claims 1-8.

Claims 10-12, 13-23 and 28 are related to a known fiber as discussed below.

Claims 24-25 are related to the preform to produce the fiber as claimed in claims 10-23.

Claims 26-27 is the related to the production method of the fiber.

The common concept among these groups of claims is a photonic crystal fiber having also voids on the outer cladding, which is known as will be explained below.

Since, the common inventive concept among these claims is known and the remaining features are related to different technical problems, the current applicant lacks unity (Rule 13.1 PCT).

Re Item V

Reasoned statement with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Reference is made to the following document, cited in international search report.

D1: WO00/49435

The documents D2 - D4 were not cited in the international search report.

D2: Cladding pumped Ytterbium-doped fiber laser with holey inner and outer cladding, Optics Express, Vol.9, No:13, pp.714-720, Furusawa, K. et. al.

D3: Photonic Band Gap Guidance in Optical Fibers, Science Vol.282, Issue 5393, pp 1476-1478, 20.Nov.1998, Knight, C.J.

D4: US2002/0061176 A1

[lack of novelty]

The present application does not meet the criteria of Article 33(1) PCT, because the subject-matter of claims 10,12, 13,14,15 is not new in the sense of Article 33(2) PCT.

The document **D2** discloses (the references in parentheses applying to this document): A silica based (p.715, lines 37-41) optical fiber (Fig.2) comprising a: a core region

b1: a microstructured cladding region surrounding the core region, wherein the cladding region comprises a background material with a refractive index n₁, comprising thermally collapsible holes.

b2: an outer cladding region with a refractive index n₂, wherein the outer cladding also comprises thermally collapsable holes or voids having a diameter d₂ and n₁ is larger than n₂ (Fig.1). The relationship between n₂ and n₁ can be easily recognized in Fig.2. As can be seen in Fig.2, the fraction of holes to the material in the outer cladding is higher (lower refractive index) than the fraction of holes to the material in the inner cladding (higher refractive index), which implicitly means n₁ is larger than n₂.

Therefore the subject matter of claims 10,12,13,15 is not new.

[lack of inventive step]

The present application does not meet the criteria of Article 33(1) PCT, because the subject-matter of claims 1-9,11,14,16-19,20, 21, 22,23-26,27-29 does not involve an inventive step in the sense of Article 33(3) PCT.

D1 discloses a photonic crystal fiber, having thermally collapsable holes and voids in the cladding region, but it does not discloses an outer cladding (i.e Fig.3).

D1 teaches, that during fusion splicing of two photonic crystal fibers the air inside would expand explosively and destroy the fiber ends being joined (p.3, lines 18-20) D1 also teaches a method to splice such a fiber, without having the explosively expansion of air in the holes wherein existing holes or voids are partially or completely collapsed in the heat treated region (p.4, lines 3-27) and spliced together with fusion splicer (p.6, line 19).

To avoid explosion of holes, D1 discloses a heat treatment (p.3, line 24, p.4, line 27)

INTERNATIONAL PRELIMINARY

EXAMINATION REPORT - SEPARATE SHEET

any time after fabrication.

Despite, the fiber disclosed in D2 has an outer cladding with holes in contrary to the fiber disclosed in D1, the skilled person would be aware of the expansion of the air in the holes of the outer cladding of the fiber and would thermally collapse them, when he wants to splice such a fiber and any other optical device together (p.6, lines 8-25). and would apply the method disclosed in D1 to splice such fibers.

Therefore, the subject-matter of claims 1-9,11 does not involve an inventive step in the sense of Article 33(3) PCT.

Claims 14,16-19 are various combinations of the refractive indices at core, first and second claddings. D1 (Fig.6), D2 (Fig.2), D3 (Fig.3 and 4) and D4 (Fig.2,3,8,9,10) disclose also various combinations. Therefore the skilled person would choose a suitable combination among the various possibilities without using inventive skills.

Claims 20,22-23 specify dimensions of the core and cladding. The skilled person would select suitable dimensions depending on the wavelength, power and environmental conditions.

Therefore, the subject-matter of claims 20,22-23 does not involve an inventive step in the sense of Article 33(3) PCT.

Claim 21 specifies operating wavelength, which is widely used in the art.

Therefore, the subject-matter of claim 21 does not involve an inventive step in the sense of Article 33(3) PCT.

Since the fiber having voids in the outer cladding is known from D2 and the production method of a fiber without an outer cladding both with holes in the cladding is known, the skilled person would modify this method to produce the fiber disclosed in D2. Therefore the subject matter of claims 24-26 does not involve an inventive step in the sense of Article 33(3) PCT.

Claims 27-29 describe products obtained using the fiber disclosed in D2. Therefore, the subject-matter of claims 27-29 does not involve an inventive step in the sense of Article 33(3) PCT.

EXAMINATION REPORT - SEPARATE SHEET

Contrary to the requirements of Rule 5.1(a)(ii) PCT, the relevant background art disclosed in the documents D1 and D2 are not mentioned in the description, nor are these documents identified therein.
